

UCaaS POD – BYO (Build-Your-Own) Unified Communications Service

UCaaS POD is a powerful, cost-effective and scalable Unified Communications solution designed by Distribution Central to provide its partners with a competitive advantage and deliver true business benefits to their customers.

UCaaS POD delivers cost reductions; increases staff productivity; and optimises processes across IT, voice and data applications and communications, which are often hampered by strict service level agreements, flat capital budgets and the use of legacy phone systems. These business challenges offer an ideal opportunity for resellers to offer Unified Communications-as-a-Service (UCaaS) to their customers.

DC has developed an integrated approach to building the ideal infrastructure stack you need to deliver a powerful, cost-effective and scalable UCaaS. The UCaaS POD integrates best-of-breed enterprise-scale Unified Communications infrastructure while also offering end users the option of avoiding capital spend by moving to an OPEX model with a simple and predictable monthly billing service.

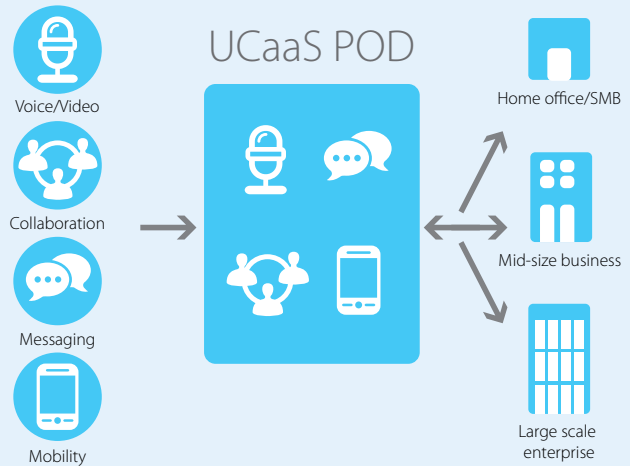

UCaaS POD integrates the technologies of:

- Avaya's UC & Video, SBC & Network Platforms
- Fujitsu's and VMware's primary & redundancy servers
- Security platform from Sophos
- Equinix Data Centre

The UCaaS POD infrastructure solution includes:

- A centralised voice infrastructure solution that reduces costs, simplifies management and delivers a consistent experience across your customers' sites and devices.
- A fully managed service platform enabling you to offer multi-tenant voice service offerings to your customers.
- Ability to offer multi-device UC client applications enabling telephony and UC features from a wide range of fixed handsets including access to presence, instant messaging, click to call, phone control, voice, video, visual voicemail, and web collaboration.
- High availability options that eliminate single points of failure with options for failover redundancy, redundant links and geographic diversity to improve service availability for business critical services.
- Flexible pricing options to bundle service components into a fixed fee per month.

UCaaS POD is available as a set pre-configured stack or your own configuration, starting from \$1,379* per month that supports up to 10 Avaya IP Office Virtual Servers for 100 users per site or any combination within the infrastructure resources.

*Note: All suites include support. Per month pricing is based on a monthly estimate under a 36 month contract. Additional charges will apply for any change of configuration. Server redundancy and installation services are available as optional add-ons with pricing available upon request.
