

## PerformancePOD – Highly optimised Server Application compute stack powered by Riverbed and Fujitsu

### PerformancePOD solving business IT performance issues

Many organisations struggle to keep up with the demand of continually evolving technology - cloud, mobile, big data, virtualisation - because IT systems were not constructed with sufficient flexibility to embrace these changes. Often this creates operational inefficiencies as applications and systems slow down. Enter the PerformancePOD.

PerformancePOD fuses together innovative technologies that make applications faster, converge branch infrastructure, protect branch data, consolidate data centres, and manage performance through one single solution stack from Fujitsu and Riverbed.

PerformancePOD provides a highly optimised application compute stack for the delivery of resilient applications for centralised workloads.

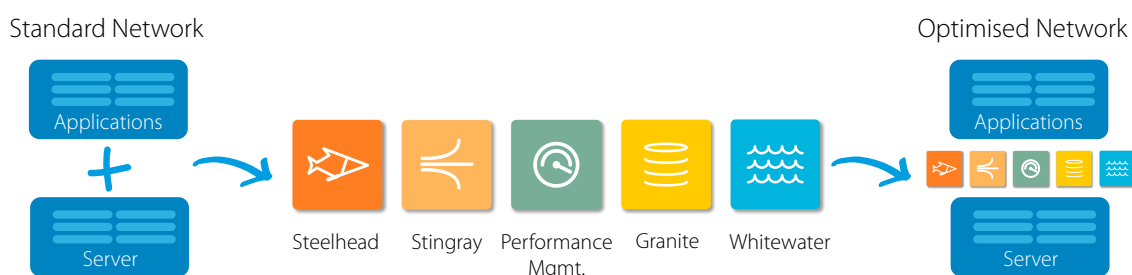

### PerformancePOD integrates the technologies of

- Riverbed's Performance Platform
- Fujitsu's PRIMERGY servers

### PerformancePOD is available as the following solutions

<b>WAN Optimisation</b>	Accelerate application and data transfer over wide area and hybrid networks Increase system performance and enhance IT control and visibility across data centres, branch offices and in the cloud.
<b>Application Delivery</b>	Make applications more reliable with local and global load balancing Create, manage and deliver Layer 7 services quickly and at a lower cost Control and optimise end-user services by differentiating and prioritising application traffic.
<b>Performance Management</b>	Monitor your entire network Map your applications dependency on the network easily with discovery wizard Identify and resolve IT issues with integrated PacketFlow (iP/F) data Effectively monitor and troubleshoot application performance issues
<b>Optional: Storage Delivery</b>	Locate virtual servers and storage at the data centre Provision and control all locations from the data centre.
<b>Optional: Cloud Backup Optimisation – Provided by Riverbed</b>	Eliminate tape, improve disaster recovery, and reduce costs Leverage the cloud as a secure, durable storage location accessible from anywhere.
